

HARSH SONI

Data Analyst | Power BI | Python | SQL

Jabalpur, Madhya Pradesh | +91-6261593894 | harshnewa@gmail.com
linkedin.com/in/harsh-soni-data-analyst | github.com/data-analyst-harsh-soni

PROFESSIONAL SUMMARY

Final-year Computer Science student and Data Analyst with hands-on experience across Power BI, SQL, and Python — built dashboards processing 35M+ records and ETL pipelines that cut processing latency by 20%. Led a 25-person analytics team at The Entrepreneurship Network while delivering 5 end-to-end BI projects, from risk modeling to enrollment intelligence. Comfortable owning a dataset from raw extraction through to a stakeholder-ready dashboard.

TECHNICAL SKILLS

Core Tools: Power BI (DAX, Power Query), SQL (PostgreSQL, MySQL), Python (Pandas, NumPy, Scikit-learn), Excel

Data Engineering & Analytics: ETL Pipelines, Data Warehousing, Star Schema Modeling, Data Cleaning, Data Quality, EDA, Statistical Modeling, A/B Testing, API Integration

Cloud & Technologies: AWS (Machine Learning Foundations), Big Data Fundamentals, Tableau, Streamlit, Matplotlib/Seaborn, Jupyter Notebook

Workflow: Agile/Scrum, Git/GitHub, Stakeholder Communication, Project Management

WORK EXPERIENCE

Associate Director – Data Operations May 2026 – Present
The Entrepreneurship Network (Remote)

- Reduced average project completion time by 30% by coordinating data collection, validation, and resource allocation workflows across 15+ data interns and 10+ junior analysts.
- Maintained 95% alignment with quarterly KPIs by implementing data quality checks and standardized reporting across 8+ analytics projects.
- Achieved 100% on-time delivery of team initiatives by resolving 5+ recurring blockers weekly through Agile sprint execution and cross-functional stakeholder communication.
- Vetted 100% of shortlisted analytics candidates by conducting 60+ technical screening interviews assessing SQL, Python, and Power BI proficiency.

Tech Lead / Scrum Master Mar 2026 – May 2026
The Entrepreneurship Network (Remote)

- Improved technical project efficiency and codebase quality by 25% by mentoring 40+ interns through weekly Agile/Scrum ceremonies and structured stakeholder communication routines.

Data Analyst Intern Jan 2026 – Mar 2026
The Entrepreneurship Network (Remote)

- Improved reporting accuracy by 15% by performing data cleaning, validation, and collection on 100,000+ rows of operational data using Python and SQL, automating 3 manual business processes.
- Increased data-driven decision-making speed by 40% by designing 3 interactive Power BI/Tableau dashboards and 2 predictive models, supported by rigorous data quality checks on input datasets.

KEY PROJECTS

Student Academic Performance Analytics (Minor Project) Mar 2024 – Apr 2024
Tools: Power BI, Python, PostgreSQL, MS Excel, ETL Pipelines | GitHub: github.com/data-analyst-harsh-soni/student-analytics

- Engineered an ETL pipeline processing 1,042+ raw records for 157 students; reduced processing latency by 20%.
- Identified Mathematics II (69% failure rate) bottleneck, enabling faculty interventions and cohort analysis with 96.5% CGPA improvement.

Zomato Business SQL Analytics Jan 2026 – Feb 2026
Tools: MySQL, CTEs, Window Functions, Trend Analysis, Aggregations

- Analyzed customer behavior across 8+ business dimensions; identified High-Value Customers (HVC) driving disproportionate revenue.
- Optimized operational delivery efficiency by mapping peak order time slots (14:00–16:00, 20:00–22:00) to delivery partner allocation.
- Modeled customer churn and year-over-year cancellation rates using CASE statements and JOINs to improve platform loyalty.

Tools: Power BI, DAX, Risk Modeling, Data Visualization, Drill-through

- Developed a centralized intelligence hub processing 26,041+ policies to track loss ratios (2.04) and high-risk segments (52.08%).
- Built interactive drill-through dashboards for risk drivers and behavior analysis, enabling granular pattern discovery across regions and age bands.

National Enrollment Intelligence System (UIDAI Hackathon)

Apr 2026 – May 2026

- Developed a Power BI dashboard analyzing 35M+ Aadhaar records; used SQL window functions to reveal a 12x regional enrollment disparity.
- Executed time-series analysis modeling seasonal trends, uncovering an 8M-record registration spike.

SolSpark - AI Solar Feasibility Platform (NASA Hackathon)

Sep 2025 – Dec 2025

- Secured Global Top 50 rank; engineered AI recommendation engine for solar plants with 90% cost-estimation accuracy using AI chatbot integration.

EDUCATION

B.Tech in Computer Science Engineering | Gyan Ganga Institute of Technology and Sciences, Jabalpur (Aug 2023 – May 2027)

CGPA: 7.5/10 | Relevant Coursework: DBMS, Machine Learning, Data Structures, Statistics for Data Science, Operating Systems.

CERTIFICATIONS

- Advanced Excel – Accounts Expert Training Services (May 2026)
- AWS Academy Graduate: Machine Learning Foundations – Amazon Web Services (Apr 2026)
- Data Analytics (Python, SQL, Power BI) – Cisco NetAcad (Jan 2026)
- Introduction to Data Science and Machine Learning – Cisco NetAcad (Feb 2026)
- Data Analysis with Python & Machine Learning – Microsoft Learn (Nov 2025)
- Data Analysis using KQL – Microsoft Learn (Oct 2024)
- Build with AI – Google Developer Group (Nov 2024)
